Waterborne lacquer for wood floors
Wasserbasierte Versiegelung für Holzböden
Acabado acuoso para suelos de madera
Vitrificateur pour parquet en phase aqueuse

THE POWER OF EVOLUTION

Bona Mega EVO™ – Faster, better and safer floor surfaces

A NEW STEP FOR MEDIUM WEAR

THE POWER OF EVOLUTION

Bona introduces Bona Mega EVO™, the next generation lacquer with a new state-of-the-art crosslinking technology that activates when applied. Suitable for use in heavy domestic and light to medium commercial areas, the unique, non-yellowing formula delivers faster curing with

excellent resistance to scratches, wear, and chemicals.

With VOC levels below 3%, the lacquer contributes to healthier working conditions with a lower impact on indoor air quality.

RAPID PERFORMANCE

Bona Mega EVO™ delivers improved performance in less time. Due to its unique capacity to self crosslink, the floor dries quicker after and between applications. Enhanced initial impact resistance minimises the potential for damage, enabling a speedier return to normal use than previously possible.

OUTSTANDING RESULTS

The topcoat cures to a clear, non-yellowing, coating, making it ideal for most types of wood floors. Bona Mega EVO's resistance to wear, chemicals, and scratches enables the floor surface to maintain its beauty for many years to come.

SAFER WORKING ENVIRONMENT

Meeting the more stringent upcoming EMICODE EC1^{PLUS} criteria with VOC levels below 3%, Bona Mega EVO™ lower emissions contribute to healthier working conditions with a lower impact on indoor air quality. In our continued work to phase out PFAS, Bona Mega EVO™ stand proud, promoting a safer environment.

FORGIVING & SAFE APPLICATION

Bona Mega EVO™ is an absolute pleasure to apply. The smooth consistency offers outstanding filling qualities. Thanks to the unique properties of Bona Mega EVO™ you can rest assured of a great result, with or without primer.

NON-YELLOWING PROPERTIES

Bona Mega EVO™ has non-yellowing properties, which means that the cured coating remains clear over time and does not amber like traditional lacquers or oils. The all-new self crosslinking technology is designed using raw materials that produce minimal odour during the application process and dissipate rapidly afterwards.

OUTSTANDING IN COMPARISON

Regarding performance, the Bona Mega EVO™ is an advancement in every way. Merging the top features from Bona Mega and Bona Mega ONE

creates an exceptional product that stands out from the competition by performing at a high level on all relevant parameters.
